	best ta ever
17	<p>The TA gave his own version of a lecture over the material we went over during the lecture portion of class previously. He was extremely flexible for office hours and open for questions on Microsoft Teams at any time which I took advantage of. His lectures were easier to follow because they only reviewed material from Dr. Wang's lecture, and he would also help with any material I didn't understand when I asked. Because the notes were very condensed, the steps in some of the example problems were sometimes hard to follow because there missing intermediate steps.</p> <p>He is an amazing math TA. Will respond quickly at almost any time of the day for individual questions on team, and always took time to explain to us concepts that we find difficult to understand. He tried to keep what he reviewed relevant to what we learned in class that day, and overall, he is a pretty great guy.</p>
