Interests & Objectives

I am looking for a part-time or full-time teaching position at the college or university level. More specifically, a position in which I can learn and grow in a mutually beneficial environment. My teaching philosophy is rather simple: to be as subjective as possible when dealing with students. Each student is unique and learns in their own way and has their own background. There is no single algorithm across the board for each student. My goal is to adapt my teaching strategies to my students capabilities and needs, not the other way around. In order to achieve optimal learning, I employ a variety of techniques that cater to multiple learning modalities and build on each student's skills and talents.

Qualifications

I have a Bachelor of Science in mathematics from UCLA as well as a Master of Science in mathematics from CSULB. In addition, I have over ten years of private tutoring experience with students with multiple learning types and abilities and have worked for tutoring establishments such as Mathnasium and even Cypress Community college. In my spare time, I upload mathematics tutorial videos daily to my YouTube channel as well as content to my mathematics website MyMathYourMath.com. Additionally, I am a certified swim instructor and lifeguard and I hold private swimming lessons as well. Having had the opportunity to hone my skills as an instructor, teacher, and mentor in areas beyond math, I have ample experience scaffolding curricula and modifying and adapting lessons that respond to individual student needs. I have also completed two years of math at the PhD level.
